

Getting TUFF on industrial health risks!

CASELLA CEL is expanding its portfolio of dust monitoring instrumentation with the launch of a new personal air sampling pump for occupational and industrial hygiene roles. TUFF by name and tough by design, the pump is designed to be belt-worn by staff to measure their exposure to dust as well as fumes, gases or vapours. It complements the popular APEX range of pumps, which will continue to be aimed at niche applications.

The three models - TUFF, TUFF Plus and TUFF Pro - will satisfy specific sampling requirements, from simple abatement monitoring to detailed, pre-programmable sampling regimes with report generation.

Safety & Comfort with JSP

JSP'S MARK VI/VII safety helmets, designed for comfort, performance and style, incorporate the most innovative features. Options include ventilated or non-ventilated formats; the new EasyJust® slip ratchet adjustment sizing system with intuitive harness adjustment and patent-applied pencil holder, or the Push and Twist Lok Wheel Ratchet adjustment system; and a standard peak for sun and wet weather protection, or short peak for working at heights or surveying.

Sureslide® Retractable Visor system is a dropdown visor that parks safely away into the helmet, which also features an international slot attachment system for standoff ear defenders and a sprung visor, developed exclusively for use with these hard hats.

Safesite - the height of safety

SAFESITE, WORKING with the Estates & Facilities Department at Aston University, have ensured that those working at height can be

rescued competently and efficiently in the event of a fall, through the provision of rescue equipment and training for all those responsible for, and carrying out, work at height. The on-site training at the University included an overview of work at height statistics and legislation, rescue risk assessments and policies, and practical use of the rescue kit.

Safesite remain committed to ensuring that work at height is carried out safely, and offer advice regarding compliance with the latest legislation, CPD training, and workplace health and safety.

Asbestos Compliance and Management

SINCE 2002 there has been an explicit duty on persons responsible for the upkeep and maintenance of non-domestic buildings to 'Manage' the risk from Asbestos within their properties.

Regulation 4 of the Control of Asbestos Regulations 2006 requires duty holders to have suitable training, inspect their properties

and maintain a written Asbestos Management Plan.

The primary purpose for this management process is to protect tradespersons and workers from exposure to asbestos during their normal working activities.

Ayerst Environmental can assist by providing suitable training and assisting in all aspects of the management / compliance process.

Biodegradable Wipes début at Safety & Health Expo

SYCAMORE'S NEW big wipes offer big protection in the workplace. The NHS-tested antibacterial Industrial Big Wipes kill over 99% of all harmful bacteria including MRSA, C. Dif., E-Coli 157, Weils, and Salmonella. Their advanced formulation also quickly removes hazardous residues that other cleaners can't handle, such as high performance coatings, sealants and adhesives which are known to be carcinogenic, and to cause dermatitis. The wipes will also remove oil, tar, grease, paint, permanent marker and general grime from equipment and work areas making them ideal for all manufacturing, engineering, mechanical, automotive, construction and service environments. See them at the Safety & Health Expo on Stand No E71 in Hall 1.

Cirrus equip H&S Officers

CIRRUS RESEARCH plc, UK specialist in the design and development of noise measurement equipment for health and safety applications, will be unveiling several exciting new developments to its range of noise instruments, support packages and training at the Safety & Health Expo.

In line with Cirrus' philosophy of ease of use, flexibility, simplicity and reliability, these new developments will give Health & Safety officers a new set of tools to help them meet the Noise at Work Regulations, as well as introducing to the market features and functions which have previously been unavailable to the Health & Safety professional. See their new products on Stand E75 in Hall 1.

Lyon reaches heights with Falcon

PETZLS NEW Falcon work positioning harness range will be the centre of attention on the Lyon Equipment stand at this year's Safety & Health Expo.

The Falcon Ascent with its comfortable and lightweight design will be of particular interest to those in the installation & inspection sectors. A super-low attachment point makes this the most efficient rope climbing harness yet, proving to be excellent where long climbs or restricted movement needs maximum gain with each step.

As usual there will be the opportunity to view industry specific 'work at height' equipment and discuss any training needs with our experienced technical staff.
