

QuanTec range gets extended cover

Johnson & Starley has extended the five-year free parts and labour guarantee to cover all of its QuanTec boiler range.

When installed as a package with any of the Johnson & Starley Aquair range, the five year guarantee will also apply to the Aquair.

The QuanTec HR28C is the smallest boiler on the market with integral passive flue gas heat recovery and also the only fully condensing boiler with efficiencies not reached by other manufactures.

The Aquair range has been extended with the introduction of the highly versatile downflow S-36 water to air space heater. It offers all the benefits of centralised heating and can replace a warm air heater, making use of existing warm air ducting.

Designed for use with a vast range of renewables and traditional heating sources, the S-36 sits at the top of the Aquair range and its output is ideal for larger premises.

Take abrasive action with Big Wipes

The all-new Abrasive Quad Fabric from Big Wipes grips 40% more grime with every wipe, so you can mop up even the toughest dirt in the quickest time.

The enhanced scrubbing power of the abrasive surface drives the powerful Big Wipes 4x4 formula deep into the dirt to speed up cleaning.

The smooth face now has an absorbency of 7.93 gr/gr, which equates to a fabric absorbing quality of almost 800%. This results in the muck being soaked up and trapped in the wipe, leaving your hands, tools and surfaces cleaner than ever.

The new abrasive wipes are kind to your hands and the environment: no chemicals or preservatives have been added and the fabric is made from pure polymers, which is 100% recyclable.

Caspian Skyline joins Smith's range

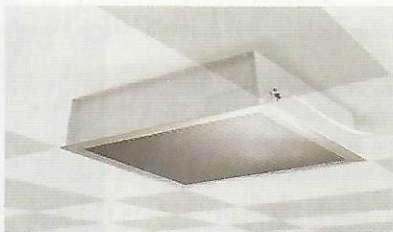

The latest addition to the Caspian range, Caspian Skyline CT60, fits into a suspended ceiling within a standard 600 mm x 600 mm ceiling tile, providing easy access for both installation and maintenance.

It's been developed using EC motor technology, meaning it's very efficient, quiet to run and simple to maintain.

It may be used alone or in series with other Caspian products, or to complement the aesthetics of the building.

Like all Caspians, the Caspian Skyline is hydronic and plumbs into any wet central heating system in place in the building.

With heat outputs up to 5.1kW (17500Btu/h), it's suitable for projects in schools, retail or food units, showrooms and offices, or where the heating needs to be discreet.

More space saving from Lecico

At the heart of the new Space Saving range from Lecico is a Close Coupled WC with a total projection of just 614mm.

The Space Saving range is a WRAS approved dual mechanism suitable for 4/2.6l flushing and has a European Water Label rating of 2.98l.

This new WC has been created to offer a clean streamlined modern design that takes up less space and complements a number of Lecico's short projection basins.

The basins, all with less than 380mm projection, have been selected from the broad range of products within the Lecico portfolio and are showcased with the space saver WC in the new Space Saver bathroom brochure.

iBoost offers the ultimate solution

Stuart Turner has introduced the new flomate iBoost. Developed for larger domestic properties with significant water pressure and flow demands, the new fully integrated package combines a 200 litre cold water break tank to overcome restricted mains water flow and a high performance multi-stage pump to boost pressure.

The flomate iBoost is capable of delivering water at pressures up to 4.5 bar and peak flow rates in excess of 100 litres per minute.

The iBoost features a high gloss white front panel and won't look out of place if standing among other appliances. Alternatively, it can be concealed within a 600mm width cabinet.

The water tank features a high recovery rate, low noise fill valve, capable of refilling the tank more quickly and quietly than any competitive product.

Ideal extends the IMAX EL range

Ideal Commercial Boilers has extended the IMAX EL range with additional models ranging from 715kW to 1,240kW.

The range offers greater output flexibility in a compact and lightweight package for ease of installation, even within the trickiest of applications.

Further expanding the flexibility while still retaining a compact size, the range extension outperforms the 2015 ErP requirements, as well as offering very low NOx Class six performance for maximum points on the BREEAM scale.

The Imax Xtra EL is designed for central heating of commercial premises and, specifically, for commercial applications looking for larger outputs in a smaller scale package.

Their compact size means that they are easy to manoeuvre during installation and take up a minimal amount of space within the building.
