

COMFORT WITH CUT PROTECTION

uvex's C500 cut protection gloves are designed to give the wearer comfort and high cut protection.

uvex's C500 gloves are highly breathable help to reduce sweat and, due to their Bamboo TwinFlex Technology, feature a soft and silky yarn, offering moisture absorption and temperature control. The gloves are said to offer the highest level of cut protection, abrasion resistance and therefore, safety when handling important tasks.

The range features uvex Climazone technology for maximum hygiene and comfort and is also certified in accordance with the Oeko-Text Standard 100.

PROTECTING YOUR SKIN AT WORK

Cedrec has issued advice to ensure employees protect their skin at work.

Gloves are the last resort and any workplace which has recognised risks to skin should consider how to eliminate the threat of contact prior to using gloves.

If this is impossible, then gloves used must meet European Standard EN374-3. This does not mean the gloves will be adequate for all materials and substances, however.

Materials for gloves differ in the same way as the substances to be handled differ, and you must be equipped and prepared for this. Chemical protection gloves (EN388), and thermal gloves (EN407) are available.

THE SKY'S THE LIMIT

Globus has enhanced its range of chemical-resistant gloves with the launch of SKYTEC Nero – combining chemical and mechanical protection with comfort, dexterity and grip.

Suitable for a range of industrial applications from chemical processing and manufacturing to utilities, engineering and agriculture, SKYTEC Nero is designed to not only protect workers against water-based chemicals but also delivers abrasion

and tear resistance performance. The result is a natural-rubber glove suitable for heavy-duty handling, processing and maintenance tasks.

Featuring a hexagonal textured pattern on the palm and fingertips for enhanced grip in wet and slippery conditions, SKYTEC Nero is also comfortable due to its anatomical shape, designed to minimise hand fatigue.

TAKE ABRASIVE ACTION

Incorporating the latest high adhesion web technology, the new Abrasive Quad Fabric from Big Wipes grips 40% more grime with every wipe, so you can quickly mop up tough dirt.

In 2014 Big Wipes launched its 4x4 range of industrial strength wipes, containing four cleaning agents and four dermatologically tested skin conditioners. Now Big Wipes has combined the 4x4 formula with the its Heavy-Duty Quad Fabric.

The Quad Fabric wipes have increased strength and greater absorbency, which makes them

tougher in use and able to soak up extra grime.

The enhanced scrubbing power of the abrasive surface drives the 4x4 formula deep into the dirt to speed up cleaning. The smooth face now has an absorbency of 7.93 gr/gr, which equates to a fabric absorbing quality of almost 800%. This results in the muck being soaked up.

NEXT GENERATION HAND CLEANSERS

Many ordinary industrial products use 'unfriendly' chemicals that are cheaper than the real quality ingredients, according to CKL Skin Care (Clyde Knitwear).

However, powerful cleansing without drying the skin is not possible with the cheaper chemicals, and your skin will pay the price difference with the frequent handwashing demanded in some workplaces, the company adds.

CKL Skin Care says that its next-

generation hand cleansers not only use premium quality pH-Neutral ingredients and in far higher concentrations, but actually cost less than the big name brands.

CKL's sales director Bali Rakhra said: "Occupational dermatoses are becoming increasingly prevalent, as is the UK's compensation culture.

So we decided only to use premium ingredients. The difference astounded even us. Skin instantly looks and feels different, radiating a visible glow of health when it is truly clean and properly moisturized."

HANSAN PASSES VIRUCIDAL TEST

Handsan, Evans Vanodine's alcohol based hygienic hand rub, has passed European Test Method EN 14476 against Vaccinia virus with a one minute contact time. This indicates effective activity against enveloped viruses, including Human Immunodeficiency Virus (HIV), Influenza Virus, Herpesvirus and Hepatitis B.

Handsan is a fast acting and effective hygienic hand rub, with 70% alcohol to ensure no residue or odour is left behind on hands. It also contains added glycerine to help protect and moisturise the skin. It also passes EN 1276, EN 13727 and EN 1500 and is available in 5 L, 500 ml pump bottle, 75 ml spray bottle with clip and 1 L sealed cartridge for use in the Evans Evolve dispenser.

TOUCHLESS SOAP DISPENSING

Northwood Hygiene Products' new Leonardo Soap Dispensers incorporate the latest features in touchless electronic soap dispensing.

With Leonardo's soap dispensers, when battery levels fall below a certain level, there is an automatic conversion to a manual operation.

The panel on the dispenser lights up, users are directed to "Push - the - Cover" and they are then able to pump the soap out manually. So hand hygiene standards are maintained and cleaning operatives are now visually alerted to the need for replacement batteries to be installed.

Designed to be easy to clean and maintain, the products can dispense lotion or foam soap or even a hand sanitiser as required. The soaps are dermatologist approved making them suitable for use on sensitive skin and for those with skin complaints.
